

Professional Statement

Cybersecurity Career Portfolio

About Me

I am passionate about cybersecurity and interested in protecting people, organizations, and digital systems from cyber threats. I enjoy understanding how technology works, analyzing security problems, and learning how vulnerabilities can be identified and addressed.

My Cybersecurity Development

I am building my cybersecurity foundation through structured learning and hands-on practice. My development includes the Google Cybersecurity Certificate, TryHackMe labs, Linux and Kali Linux, security tools, networking concepts, and Python programming with a focus on cybersecurity and automation.

Current Skill Development

Area	Development
Cybersecurity	Security fundamentals, threats, risks, vulnerabilities, ethics, and security controls
Hands-on Practice	TryHackMe introductory offensive and defensive security labs
Systems	Linux and Kali Linux fundamentals
Programming	Python for cybersecurity and automation
Professional Skills	Problem-solving, communication, continuous learning, and professional development

Career Goal

My goal is to pursue an entry-level cybersecurity role where I can apply my growing technical knowledge, develop practical security skills, and contribute to protecting systems and organizations. I want to grow into a cybersecurity professional who combines technical ability with ethical judgment, curiosity, and continuous learning.

Professional Statement

I am committed to developing the skills needed to help defend against cyberattacks. I approach cybersecurity with a learner's mindset: understand the fundamentals, practice safely, analyze problems carefully, and keep improving. Through continued hands-on training and technical development, I aim to turn my interest in cybersecurity into meaningful professional capability.
